KB-Protect Wordpress Dashboard (Admin Console) With

MFA Using DUO

Saturday, September 16, 2023 6:01 PM

Go to https://duo.com

Log in with your administrative credentials or create an account (free up to 5 users).

Create a "user" with the username that you use to authenticate to the Wordpress dashboard. Hint: if you already have a user created you can add an alias to the existing user.
 Add a phone associated with the user in the lower section of the add menu so the user will be able to interact with the DUO app and receive a DUO Push.

Click on Applications and select protect an application. Then search for wordpress and select protect this application.

✓ Search for Wordpress and select protect application.

wordpress		
Application	Protection Type	
WordPress	2FA	Documentation 🗗 Protect

Click through the prompts and save. Then the IKEY, Secret Key, and API Hostname will be displayed. Keep this in mind as we'll need this information in the next couple steps. Dashboard > Acetications > WordPress

Bulk actions		1 item

Vow, copy in your IKEY, Secret Key, and API Hostname and untick contributor and subscriber then click save changes.

Main Settings		
See the <u>Duo for WordPress guide</u> to	enable Duo two-factor authentication for your WordPress logins.	
You can retrieve your integration key	, secret key, and API hostname by logging in to the Duo administrative interface.	
Note: After enabling the plugin, you	will be immediately prompted for second factor authentication.	
Integration key		
Secret key		
API hostname		
Enable for roles:	Administrator Editor Author Contributor Subscriber	
Disable XML-RPC (recommended)	Yes Using XML-RPC bypasses two-factor authentication and makes your website less secure. We recommend only using the WordPress web interface for managing your WordPress website.	
Save Changes		Activate Windows

🗸 After clicking save changes, the DUO prompt will walk you through verifying your phone number and you can authenticate with a test DUO Push.
